Priority number(s):

Abstract of JP2001113108

PROBLEM TO BE SOLVED: To provide a disk filter cartridge capable of solving the problem in which cell themselves are adhered closely or extremely separated by causing the deformation of the cell only a constant direction.

SOLUTION: In the disk filter cartridge obtained by laminating in multistage a filter cell and sealing the outer peripheral part of a disk-shaped filter material with a ring, a weight of the ring is kept in different at above and below around a parting line (sticking part of the filter material) to control the deformation of each filter to the same direction at use of the filter.
